FJORD

Sticky, shiny, wrinkled or simply ugly: although nature has not spoiled them, some species attract our curiosity. Questioning their appearance means learning to look at them differently and to understand their specificity. Even hideous, these animals are essential players in life, because they contribute to biodiversity.

Their surprising characteristics encourage us to review our perception and to question the criteria that define ugliness, including those we have for ourselves and for others.

The exhibition will explain how our relationships with “ugly animals” have evolved and what historical and cultural elements could be at the origin of disgust and phobia towards certain species. Humor and science coexist in this original exhibition!
